OTO Park — the decisions only you can make

14 October 2026

The 13 October list had 116 discussion points. Most of those were technical choices, and we have now settled them ourselves and recorded them — you do not need to read them. This document keeps only what is genuinely yours to decide: money rules, what staff are allowed to do, a few customer-facing policies, numbers to confirm, and some information only you can supply.

How to answer: reply with the number and either "agree" or your alternative. Every question carries our recommendation, so "agree to all" is a complete answer. Nothing here is urgent enough to block daily work; items marked ● unblock a piece of waiting work the moment they are answered.

A. Money rules

A1. ● A party's money on the daily report. When a family pays today for a party happening next month, should today's revenue include that payment, or should the money count on the party's date? *Our recommendation: count it on the party's date (today shows only payments for parties held today).* This decides what "today's party revenue" means on your dashboard.

A2. ● Refunding prepaid lunch money. Today, refunding a child's prepaid lunch leaves the lunch credit still spendable — a family could get the money back and still spend the credit. *Our recommendation: the refund removes the unspent credit, and a refund is refused once the credit has already been spent.*

A3. ● Credit vouchers without payment. The till currently lets reception issue vouchers that add spendable credit nobody paid for. *Our recommendation: only managers may issue these, and they appear under promotions in the reports so given-away credit is always visible.*

A4. Credit spent at the other park. When credit bought at Floresta is spent at Chalong, whose books carry it? *Our recommendation: the selling park keeps the money and the liability; the spending park's report shows the redemption as a separate line, so network totals always add up.*

A5. Camp walk-ups. When a child joins a camp partway through, should the desk charge once for the remaining days, or charge again at each day's check-in? *Our recommendation: charge one day's price once, and the child is registered from today to the end.*

A6. A sale that was never finished (confirm). We built this already with a sensible rule and want your nod: when a sale took some money but never completed (for example card declined after a deposit), a manager refunds everything taken and the sale files under "cancelled" in the records, with day-end figures balancing automatically. *Keep it this way unless you prefer something else.*

A7. Money during an internet outage (two linked rules). (a) If the card terminal took the payment but the till never got the answer, staff may record the terminal's approval code so the sale is captured and reconciled later. (b) Wristband credit spent offline is capped at **฿300 per wristband per day**, and same-day credit expires that night. *Our recommendation: yes to both; the ฿300 cap is adjustable at any time.*

A8. Opening stock. Count opening stock separately for each storage place (kitchen, shop, store room), not once for the whole park. *Our recommendation: per place — this is expensive to change later, so we want your explicit yes.*

A9. Different VAT by category. Does any branch ever need a different tax treatment per product category (for example food taxed differently from tickets)? Today everything uses one branch rule and an unused category-exception option sits in the system. *Our recommendation: if you never need this, we retire the unused option.*

B. What staff may do

One table — tick each row you agree with, or write your change.

#	Action	Our recommendation
B1	Refund a sale	A manager approves; reception cannot refund alone
B2	Refund after a card payment can no longer be cancelled	The family receives cash (card return depends on what the terminal supports)
B3	Give a full comp (100% free order)	The manager's action itself is enough — no second approval step
B4	A cashier using their own staff benefit	Allowed; both identities are recorded on the sale
B5	Discounts and comps while the internet is down	Same permissions as online; refunds stay impossible offline
B6	Permanently remove a member's verified (local) rate	Manager only
B7	Open the Radar revenue dashboard	Administrators only for now — note: Radar shows every park's figures, so a single-branch manager would see all branches. Say the word if managers should have it

B8. Staff benefit amounts (confirm the numbers). Owner: everything free. Manager: 2 coffees/day, ฿500/month allowance, 30% off food. Staff: 2 coffees/day, 30% off food. Benefits are spendable at **food counters only**, not at the ticket till. *Confirm these amounts and the food-only rule — all of it stays editable.*

C. Customers and families

C1. Extra play time and child care. When a family buys extra play time, should a child's supervised-care (drop-off/nanny) time extend with it, or is care time booked and paid separately? *Our recommendation: keep them separate — care staff plan around firm end times.*

C2. Party extras and the kitchen. Should party add-ons (extra pizzas, socks) create normal kitchen tickets, stock movements and sales records like any other order, or stay only on the party bill? *Our recommendation: create the normal records — the kitchen sees the order and stock stays true.*

C3. Discounts on printed receipts. Printed paper receipts currently show no discount lines for any sale — a family that used a promo code sees only the final total on paper (the screen shows the detail). *Our recommendation: add the discount line to printed receipts.*

C4. Old families in the new member list. When we import the old system's data, should past check-in families automatically become member records (marked unverified), giving reception a full list from day one? *Our recommendation: yes, import them as unverified members.*

C5. How long we keep records and photos. Propose: child visit photos — 30 days after release; financial and child-release records — 5 years (legal); ordinary operational records — 2 years. Chat/conversation media will follow the same schedule when the Inbox is built. *Confirm or adjust these periods — nothing is deleted until you approve the schedule.*

C6. Face clock-in for staff. It stays switched off (staff use PIN/phone). Turning it on in production later needs a planned re-enrollment of everyone's face and your explicit go, since it is biometric data. *Our recommendation: keep it off until you decide otherwise. Nothing to do now unless you want it scheduled.*

D. One number that touches everything

D1. The business day starts at 05:00. Reports, prices, promotions and daily staff benefits all reset at 05:00 Bangkok time, not midnight — so late trading stays with the same day's cash-up and a promotion does not flip at midnight mid-shift. *Confirm 05:00 as the single boundary for all of these.*

E. Information only you can supply

- **E1.** Old staff records' times: were they written in Bangkok time, UTC, or mixed? One known shift with its real local time is perfect evidence.
- **E2.** Who should receive urgent system alerts out of hours, and how (email / WhatsApp)? A first and a backup name.
- **E3.** The final data handover: the Radar database copy, the wheel's database, the staff app's final export, and stored files/photos — who supplies them and when. (Please also do not cancel Pisell or Papaya until the history export is done.)
- **E4.** The switch date: which quiet day we aim for, and from when the old systems stop taking edits.
- **E5.** The printed voucher data: the published legacy voucher codes and campaign dates, so old printed vouchers keep working after the switch.
- **E6.** "Omni" / Marketing Hub: something outside the suite reads Radar's marketing summary feed. Who uses it, and is it still needed? (If yes, we connect it to the new figures; if no, we retire it.)
- **E7.** Does any outside service still use the old shared staff-directory connection, and who looks after it?
- **E8.** Xero: which test organisation and which person should sit with us for the one controlled connection test?

F. For your records — no action needed

- **Built on your earlier direction:** the booking website now shows a returning family their saved children only after a one-time SMS code — exactly the rule you chose in October.
- **Roughly seventy technical points** from the 13 October list (screen layouts, timeouts, rounding, offline technical limits, report presentation details and similar) are now settled by the team with sensible defaults and recorded in the project. The full 13 October document remains on file as the reference; any of it can be reopened with one word.
- **The Inbox questions** (numbers 20–26 of the old list) wait until we build the Inbox — we will bring a short version then.
- **The staff app keeps working exactly as it does today.** The old list's 21 "optional refinement" questions need no answer; they are on file for whenever you feel like tuning.
